

# Liberty MDrive 42mm Rotary Stepper Motor

Ethernet TCP/IP NEMA 17 integrated 1.8° 2-phase stepper motor & control electronics

UL LISTED US CE RoHS REACH IP20/IP65

## PRODUCT OVERVIEW

Robust Liberty MDrive (LMD) Ethernet TCP/IP products integrate 1.8° 2-phase stepper motors with control electronics including an Ethernet controller that supports user-selectable protocols: Profinet, EtherNet/IP, Modbus/TCP, and MCode/TCP. An optional encoder delivers hMT closed loop performance.

hMT closed loop performance is available in products with either a multi-turn absolute encoder or incremental magnetic encoder. Closed loop performance maintains functional motor control to prevent loss of synchronization, offers variable current control, torque control, and use more of the motor's full torque range.

Multi-turn absolute encoders may benefit users by retaining position information when powered down. This can eliminate homing routines and reduce setup time at system startup.

LMD products are ODVA-compliant adapter class devices capable of explicit or implicit messaging. Compact motion control solutions that interface with many manufacturer's systems.

Especially well suited for industrial applications, products include an IP65 rated version with circular M12 connectors.

Liberty MDrive products can reduce machine complexity, size and cost in many stepper and servo motor applications. Their high degree of integration can increase system reliability by reducing the number of individual components, eliminating multiple potential failure points.
